Program Description

Freshwater resources are critical for human survival and economic development, as well as for maintaining ecosystem health. Water scarcity also threatens food supplies and human health. To address this increasingly serious problem, aquatic resources scientists link and integrate scientific, technical, and socioeconomic elements in pursuit of sustainable aquatic resources in Texas, across the nation and around the world.

The Department of Biology at Texas State University offers a doctorate (PhD) in aquatic resources. With an emphasis on original research, the program is designed to provide depth and breadth of knowledge in aquatic resources and related disciplines, from the watershed to the population, organismal and microbial scale, including basic and applied research, and water systems management and policy.

Students learn the application of this research and knowledge, both independently and with other specialists, in a multidisciplinary environment. Graduates are prepared to identify and solve complex problems and issues relevant to the sustainable use of aquatic resources and ecosystems.
